(a)
every profile finishes bidding, and
the bound is below the trivial bound
and the monitor can fire at a price of 0.5
largest number of profiles Q
horizon n
K = 3; even arrival path
(b)
Q = 1
Q = 2
Q = 3
certified deviation gain (total)
horizon n
cells in which every profile finishes bidding
(c)
K = 2
K = 3
smallest horizon, log10 n
capacity gap δi at a non-top pro
horizons that can be run
K = 2 and K = 3 differ by at most
0.01 in the exponent
